ANAPHYLAXIS POLICY
Clifton Hill Primary School
2018

BACKGROUND

Anaphylaxis is a severe, rapidly progressive allergic reaction that is potentially life threatening. The most common allergens in school-aged children are peanuts, eggs, tree nuts (cashews), cow’s milk, fish and shellfish, wheat, soy, sesame, latex and certain insect stings. Although allergic reactions are common in children, severe life threatening reactions are uncommon and deaths are rare. However, deaths have occurred and anaphylaxis must therefore be regarded as a medical emergency.

A mild to moderate allergic reaction will include one or more of these symptoms, and it is possible that a number of them will occur simultaneously:

- swelling of the lips, face and eyes
- hives or welts
- tingling mouth
- abdominal pain and/or vomiting (these are signs of a severe allergic reaction in the case of insect allergy).

Anaphylaxis (severe allergic reaction) can include:

- difficult/noisy breathing
- swelling of tongue
- swelling/tightness in throat
- difficulty talking and/or hoarse voice
- wheeze or persistent cough
- persistent dizziness or collapse
- pale and floppy (young children)
- abdominal pain and/or vomiting are signs of a severe allergic reaction to insects.

Symptoms usually develop within ten minutes and up to two hours after exposure to an allergen, but can appear within a few minutes.
PURPOSE

• To ensure the school fully complies with Ministerial Order 706 and the associated guidelines published and amended by the Department.
• To provide, as far as practicable, a safe and healthy school environment that takes into consideration the needs of all students including those who may suffer from anaphylaxis.
• To ensure that staff members respond appropriately to an anaphylactic reaction by initiating appropriate treatment, including competently administering an adrenaline auto injector.

IMPLEMENTATION

The key to prevention of anaphylaxis in schools is knowledge of those students who are at risk, awareness of triggers (allergens) and prevention of exposure to these triggers. The school will manage anaphylaxis by;

• Ensuring that a response is provided by parents at enrolment as to whether a child has been diagnosed with anaphylaxis
• Routinely reminding parents and students via the school newsletter (twice per year) to advise the school of any change in their circumstances, including any relevant changes in the diagnosis and treatment of medical conditions
• Ensuring that an Individual Anaphylaxis Management Plan (see Appendix 1) is developed, in consultation with the student’s parents, for any student who has been diagnosed as having a medical condition that relates to allergy and the potential for anaphylactic reaction
• Ensuring that the Individual Anaphylaxis Plan is in place as soon as practicable after the student enrolls, and where possible before the student’s first day at the school
• Including the following in the Individual Anaphylaxis Management Plan; information about the medical condition, strategies to minimise the risk of exposure for in and out of school settings organised by the school, emergency contact details, information on where the student’s medication will be stored and an ASCIA Action Plan (see Appendix 1)
• Reviewing each student’s Anaphylaxis Management Plan in all of the following circumstances; annually, if the students medical condition changes, after a student has an anaphylactic reaction at school and when a student is to participate in an off site activity such as camps and excursions
• Purchasing additional adrenaline autoinjectors for general use and as a back up to those supplied by parents
• Completing an annual Risk Management Checklist to monitor obligations (see Appendix 2)
Parents/carers and families of children attending Clifton Hill Primary School who are at risk of anaphylaxis are required to:

- Provide an ASCIA Action plan (annually) which has been developed in consultation with the child’s medical practitioner, including up to date photographs
- Inform the school in writing if their child’s medical condition, insofar as it relates to allergy and the potential for anaphylactic reaction, changes and if relevant provide an updated ACSIA Action Plan
- Discuss prevention strategies with the school
- Supply the student’s adrenaline autoinjector and ensure it has not expired
- Ensure prompt replacement of adrenaline autoinjector when notified of expiration
- Provide an additional adrenaline autoinjector for school related activities, such as interschool sports, camps and some excursions, if requested by the school.

RISK MINIMISATION AND PREVENTION STRATEGIES

The key to prevention of anaphylaxis in schools is knowledge of those students who have been diagnosed at risk, awareness of triggers (allergens), and prevention of exposure to these triggers.

The school will:

- Know and avoid the causes of anaphylactic reactions
- Not allow food sharing or swapping
- Only give foods approved by the child’s parents to those students identified as anaphylactic
- Use non-food treats where possible, but if food treats are used, give only those provided by the parents to a student who is at risk of anaphylaxis (encourage parents to provide a container of safe treats from home)
- Never give food from outside sources to a student who is at risk of anaphylaxis
- Products labelled ‘may contain traces of nuts’ should not be served to students allergic to nuts. Products labelled ‘may contain milk or egg’ should not be served to students with milk or egg allergy and so forth.
- Practise routine hygiene and good food safety practices. Children and staff should always wash their hands after play and before and after eating
- Raise awareness of anaphylaxis with children through class discussions and newsletters
- Ensure that, should a student bring foods containing the anaphylactic trigger for a student in their classroom, the student will, under the supervision of the Principal or nominated staff member, eat lunch in a designated area within the classroom, dispose of rubbish appropriately and wash their hands thoroughly. The table this student sat at will be cleaned thoroughly with hot, soapy water. The Principal or nominated staff member will contact the family to discuss anaphylactic triggers.
• Designate a staff member to inform casual relief teachers, specialist teachers and volunteers of the names of any students at risk of anaphylaxis, the location of each student’s Individual Anaphylaxis Management Plan and adrenaline autoinjector, the school’s Anaphylaxis Management Policy, and each individual person’s responsibility in managing an incident. ie seeking a trained staff member.

• Clear communication and understanding of the location of student epipens on camps, excursions etc recorded on the Risk register). (see Sally

**Banning Of Products**

Whilst Clifton Hill Primary School does not ban nut products, we ask our families to consider the safety needs of children at risk of anaphylactic reaction before sending their child to school with nut products such as;

- Raw or cooked nuts of any type (peanuts, almonds, cashews, pistachios, macadamia nuts, etc.)
- Nut spreads of any type (e.g. peanut butter, Nutella, etc.)
- Products which contain nuts and are labelled as containing nuts (e.g. chocolate bars with nuts, stir fry lunches with nuts, almond cakes, etc.)

We appreciate your understanding and hope you will support the children who are affected by this condition. The children dealing with these allergies will feel supported knowing that other children are not bringing in particular, peanut and other nut based spreads and products to school.

The school canteen and before and after school care programs do not provide nut products to students.
STAFF TRAINING

In accordance with Ministerial Order 706, all schools must have an Anaphylaxis Supervisor responsible for verifying the training of other staff members.

Every two years, all school staff who come into contact with children must complete ASCIA e-training and have their training verified by the School Anaphylaxis Supervisor. During the verification process all staff members must demonstrate correct use of adrenaline auto-injectors and respond to school-specific scenarios.

The School Anaphylaxis Supervisor must complete approved anaphylaxis training every three years and ASCIA e-training for schools every year. The School Anaphylaxis Supervisor is responsible for running twice yearly briefings for all staff.

When a student is under the care or supervision of the school, including excursions, yard duty, camps and special event days, the Principal will ensure that there is a sufficient number of staff present who have up-to-date training in anaphylaxis management.

COMMUNICATION PLAN (SEE APPENDIX 3)

Clifton Hill Primary School will develop an Anaphylaxis Communication Plan to ensure that school staff, students and parents are educated about anaphylaxis management. The communication plan will:

- Provide information to all school staff, students and parents about anaphylaxis and how to respond to an anaphylactic episode in different settings
- Provide information to the school community regarding anaphylaxis via the school newsletter

Review: March 2019
**APPENDIX 1: Individual Anaphylaxis Management Plan**

This plan is to be completed by the principal or nominee on the basis of information from the student’s medical practitioner (ASCIA Action Plan for Anaphylaxis) provided by the parent.

It is the parent’s responsibility to provide the school with a copy of the student’s ASCIA Action Plan for Anaphylaxis containing the emergency procedures plan (signed by the student’s medical practitioner) and an up-to-date photo of the student - to be appended to this plan; and to inform the school if their child’s medical condition changes.

This Individual Anaphylaxis Management Plan will be reviewed on any of the following occurrences (whichever happen earlier):

**Signs of Mild to Moderate Allergic Reaction**
- Swelling of lips, face, eyes
- Hives or welts
- Tingling mouth
- Abdominal pain, vomiting (these are signs of anaphylaxis for insect allergy)

**Action for Mild to Moderate Allergic Reaction**
- For insect allergy - flick out sting if visible
- For tick allergy - freeze dry tick and allow to drop off
- Stay with person and call for help
- Locate EpiPen® or EpiPen® Jr adrenaline autoinjector
- Give other medications (if prescribed)
- Phone family/emergency contact

**Watch for any one of the following signs of anaphylaxis (severe allergic reaction)**
- Difficulty/noisy breathing
- Swelling of tongue
- Swelling/tightness in throat
- Wheeze or persistent cough
- Difficulty talking and/or hoarse voice
- Persistent dizziness or collapse
- Pale and floppy (young children)

**Action for Anaphylaxis**
1. Lay person flat - do NOT allow them to stand or walk
2. Give EpiPen® or EpiPen® Jr adrenaline autoinjector
3. Phone ambulance - 000 (AU) or 111 (NZ)
4. Phone family/emergency contact
5. Further adrenaline doses may be given if no response after 5 minutes
6. Transfer person to hospital for at least 4 hours of observation

**Always** give adrenaline autoinjector FIRST, and then asthma reliever puffer if someone with known asthma and allergy to food, insects or medication has SUDDEN BREATHING DIFFICULTY (including wheeze, persistent cough or hoarse voice) even if there are no skin symptoms.

**How to give EpiPen®**
1. Form fist around EpiPen® and PULL OFF BLUE SAFETY RELEASE
2. Hold leg still and PLACE ORANGE END against outer mid-thigh (with or without clothing)
3. PUSH DOWN HARD until a click is heard or felt and hold in place for 3 seconds

All EpiPen®s should be held in place for 3 seconds regardless of instructions on device label.

© ASCIA 2017 This plan was developed as a medical document that can only be completed and signed by the patient's medical or nurse practitioner and cannot be altered without their permission.
• annually
• if the student's medical condition, insofar as it relates to allergy and the potential for anaphylactic reaction, changes
• as soon as practicable after the student has an anaphylactic reaction at school
• when the student is to participate in an off-site activity, such as camps and excursions, or at special events conducted, organised or attended by the school (eg. class parties, elective subjects, cultural days, fetes, incursions).

I have been consulted in the development of this Individual Anaphylaxis Management Plan.

I consent to the risk minimisation strategies proposed.

Risk minimisation strategies are available at Chapter 8 – Risk Minimisation Strategies of the Anaphylaxis Guidelines

## General Information

1. How many current students have been diagnosed as being at risk of anaphylaxis, and have been prescribed an adrenaline autoinjector?

2. How many of these students carry their adrenaline autoinjector on their person?

3. Have any students ever had an allergic reaction requiring medical intervention at school?  
   - Yes  
   - No
   
   a. If Yes, how many times?

4. Have any students ever had an anaphylactic reaction at school?  
   - Yes  
   - No
   
   a. If Yes, how many students?
   
   b. If Yes, how many times

5. Has a staff member been required to administer an adrenaline autoinjector to a student?  
   - Yes  
   - No
   
   a. If Yes, how many times?

6. If your school is a government school, was every incident in which a student suffered an anaphylactic reaction reported via the Incident Reporting and Information System (IRIS)?  
   - Yes  
   - No

## SECTION 1: Training

7. Have all school staff who conduct classes with students who are at risk of anaphylaxis successfully completed an approved anaphylaxis management training course, either:  
   - online training (ASCIA anaphylaxis e-training) within the last 2 years,  
   - accredited face to face training (22300VIC or 10313NAT) within the last 3 years?

8. Does your school conduct twice yearly briefings annually?  
   - Yes  
   - No

   If no, please explain why not, as this is a requirement for school registration.
9. Do all school staff participate in a twice yearly anaphylaxis briefing? If no, please explain why not, as this is a requirement for school registration.
   □ Yes □ No

10. If you are intending to use the ASCIA Anaphylaxis e-training for Victorian Schools:
   a. Has your school trained a minimum of 2 school staff (School Anaphylaxis Supervisors) to conduct competency checks of adrenaline autoinjectors (EpiPen®)?
      □ Yes □ No
   b. Are your school staff being assessed for their competency in using adrenaline autoinjectors (EpiPen®) within 30 days of completing the ASCIA Anaphylaxis e-training for Victorian Schools?
      □ Yes □ No

---

**SECTION 2: Individual Anaphylaxis Management Plans**

11. Does every student who has been diagnosed as being at risk of anaphylaxis and prescribed an adrenaline autoinjector have an Individual Anaphylaxis Management Plan which includes an ASCIA Action Plan for Anaphylaxis completed and signed by a prescribed medical practitioner?
    □ Yes □ No

12. Are all Individual Anaphylaxis Management Plans reviewed regularly with parents (at least annually)?
    □ Yes □ No

13. Do the Individual Anaphylaxis Management Plans set out strategies to minimise the risk of exposure to allergens for the following in-school and out of class settings?
    a. During classroom activities, including elective classes
       □ Yes □ No
    b. In canteens or during lunch or snack times
       □ Yes □ No
    c. Before and after school, in the school yard and during breaks
       □ Yes □ No
    d. For special events, such as sports days, class parties and extra-curricular activities
       □ Yes □ No
    e. For excursions and camps
       □ Yes □ No
    f. Other
       □ Yes □ No

14. Do all students who carry an adrenaline autoinjector on their person have a copy of their ASCIA Action Plan for Anaphylaxis kept at the school (provided by the parent)?
    □ Yes □ No
    a. Where are the Action Plans kept?

15. Does the ASCIA Action Plan for Anaphylaxis include a recent photo of the student?
    □ Yes □ No

16. Are Individual Management Plans (for students at risk of anaphylaxis) reviewed prior to any off site activities (such as sport, camps or special events), and in consultation with the student’s parent/s?
    □ Yes □ No
### SECTION 3: Storage and accessibility of adrenaline autoinjectors

<table>
<thead>
<tr>
<th>Question</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>17. Where are the student(s) adrenaline autoinjectors stored?</td>

</tr>
<tr>
<td>31. Is the adrenaline autoinjector for general use clearly labelled as the ‘General Use’ adrenaline autoinjector?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>32. Is there a register for signing adrenaline autoinjectors in and out when taken for excursions, camps etc?</td>
<td>Yes</td>
<td>No</td>
</tr>
</tbody>
</table>
### SECTION 4: Risk Minimisation strategies

33. Have you done a risk assessment to identify potential accidental exposure to allergens for all students who have been diagnosed as being at risk of anaphylaxis?  
☐ Yes ☐ No

34. Have you implemented any of the risk minimisation strategies in the Anaphylaxis Guidelines? If yes, list these in the space provided below. If no please explain why not as this is a requirement for school registration.  
☐ Yes ☐ No

35. Are there always sufficient school staff members on yard duty who have current Anaphylaxis Management Training?  
☐ Yes ☐ No

### SECTION 5: School management and emergency response

36. Does the school have procedures for emergency responses to anaphylactic reactions? Are they clearly documented and communicated to all staff?  
☐ Yes ☐ No

37. Do school staff know when their training needs to be renewed?  
☐ Yes ☐ No

38. Have you developed emergency response procedures for when an allergic reaction occurs?  
☐ Yes ☐ No

   a. In the class room?  
   ☐ Yes ☐ No

   b. In the school yard?  
   ☐ Yes ☐ No

   c. In all school buildings and sites, including gymnasiums and halls?  
   ☐ Yes ☐ No

   d. At school camps and excursions?  
   ☐ Yes ☐ No

   e. On special event days (such as sports days) conducted, organised or attended by the school?  
   ☐ Yes ☐ No

39. Does your plan include who will call the ambulance?  
☐ Yes ☐ No

40. Is there a designated person who will be sent to collect the student’s adrenaline autoinjector and individual ASCIA Action Plan for Anaphylaxis?  
☐ Yes ☐ No

41. Have you checked how long it takes to get an individual’s adrenaline autoinjector and corresponding individual ASCIA Action Plan for Anaphylaxis to a student experiencing an anaphylactic reaction from various areas of the school including:  
☐ Yes ☐ No

   a. The class room?  
   ☐ Yes ☐ No

   b. The school yard?  
   ☐ Yes ☐ No

   c. The sports field?  
   ☐ Yes ☐ No

   d. The school canteen?  
   ☐ Yes ☐ No

42. On excursions or other out of school events is there a plan for who is responsible for ensuring the adrenaline autoinjector(s) and Individual Anaphylaxis Management Plans (including the ASCIA Action Plan) and the adrenaline autoinjector for general use are correctly stored and available for use?  
☐ Yes ☐ No

APPENDIX 3: CLIFTON HILL PRIMARY SCHOOL
ANAPHYLAXIS COMMUNICATION PLAN

BACKGROUND
Anaphylaxis is a severe, rapidly progressive allergic reaction that is potentially life threatening. The most common allergens in school-aged children are peanuts, eggs, tree nuts (cashews), cow’s milk, fish and shellfish, wheat, soy, sesame, latex and certain insect stings. Although allergic reactions are common in children, severe life threatening reactions are uncommon and deaths are rare. However, deaths have occurred and anaphylaxis must therefore be regarded as a medical emergency.

A mild to moderate allergic reaction will include one or more of these symptoms, and it is possible that a number of them will occur simultaneously:
- Swelling of lips, face & eyes
- Hives or welts
- Tingling mouth
- Abdominal pain, vomiting (these are signs of a severe allergic reaction to insects)

The presentation of any one of the following symptoms below indicates anaphylaxis:

- Difficult/noisy breathing
- Swelling of tongue
- Swelling/tightness in throat
- Difficulty talking and/or hoarse voice
- Wheeze or persistent cough
- Persistent dizziness or collapse
- Pale and floppy (young children)

RESPONSE TO AN ANAPHYLAXIC REACTION

Staff will participate in an Anaphylaxis Management Training course every three years and participate in two briefing sessions per calendar year (including one at the commencement of each year).

In order for staff to be aware of children at risk of anaphylaxis, the school will:

- Provide individual ACSIA Action plans for students to be clearly displayed in their classrooms
- Display photos of all students at risk of anaphylaxis in the staffroom
- Locate all autoinjectors and ACSIA action plans for each child at risk of anaphylaxis in the first aid room located near the office
- Have photos of all student at risk of anaphylaxis in each yard duty first aid bag
In the event of a student experiencing an anaphylactic reaction, staff will;

**In the Classroom**

- The teacher in charge will contact the office. They will tell the office/nurse the name of the child and their classroom location
- The nurse/office staff will take the student’s personal autoinjector and ACSIA plan to the student’s location
- The ACSIA plan will be followed and the nurse/office person will call 000 and request an ambulance

**In the Yard**

- All yard duty teachers carry a first aid bag which contains photos of all children at risk of anaphylaxis and an anaphylaxis alert card
- The yard duty teacher will send two students to the office with the anaphylaxis alert card, tell them the student’s name and inform them of their location
- The nurse/office staff will take the student’s personal autoinjector and ACSIA plan to the student’s location
- The ACSIA plan will be followed and the nurse/office person will call 000 and request an ambulance

**In the Park**

When students are taken to the park during lunchtime or for a curriculum based activity the following risk minimisation strategies are in place:

- There will be a minimum of one teacher who will have up to date anaphylaxis training
- Teachers will carry a first aid bag that contains photos of all children at risk of anaphylaxis. They also take two general use autoinjectors with them and a general ACSIA action plan
- At least one teacher will carry a charged mobile phone

In the event of a student experiencing an anaphylactic reaction, staff will;

- Administer the autoinjector and will call 000 and request an ambulance
- Send two students to the office with the anaphylaxis alert card and tell them the student’s name
- A school representative will go to the park with the student’s ACSIA plan and epipen

**At Excursions/Sports/Camps**

- The school will inform the camp of any students with anaphylaxis to ensure that appropriate arrangements are made for students participating in the class
• A review of the Anaphylaxis Management Plan will take place between the teacher/parents/nurse to discuss any risks such as location of camp, mobile phone coverage etc
• A student’s personal autoinjector, along with an appropriate number of general use autoinjectors, will accompany the student to all excursions, sports events and camps
• The autoinjector will be kept within close proximity of the student
• In the event of an anaphylactic episode, the supervising teacher will administer the autoinjector and ring 000 for further medical attention

CASUAL RELIEF TEACHERS

• Will be provided with an iPad and shown the class they are working in on Compass, including relevant student medical alerts.
• Be shown the location of each student’s adrenaline autoinjector
• Be directed to the location of the nearest staff member working near them who has anaphylaxis training in case of emergency.
